

## RELEASE NOTES - AutoMail® PRO 8

- **FASTER PROCESSING** - AutoMail 8 processing (*address standardization, presorting, etc.*) is faster than prior versions.
- **FASTER INTERFACE** – The interface, itself, refreshes faster. This is most notable with users who have an extensive number of Profiles in the opening screen when launching AutoMail, but all of the interface options open more efficiently.
- **SAME INTERFACE** – No training required. The interface, itself, is the same as AutoMail 7. All operations and functions are the same. An exception, but an improvement, to this would be that we have "removed" the 'Run Batch' button from the Batch Summary screen. This was causing confusion and users were clicking, accidentally, intending to hit the Print Reports button, which is on a different screen. The 'Run Batch' button is now in the top button-bar.
- **"PARTIAL MAILING" ENHANCED** – AutoMail 8 employs a visual "graph" which can be "dragged" with the mouse so as to simplify determining trays which would or would not be applicable to partial mailing, if so needed. This makes performing partial-mailings much simpler. "Full Service" partial mailing (*as opposed to IMb Basic Service*) is ONLY available in version 8.
- **.NET Framework 4.0** - AutoMail 8 runs on .Net 4.0 (*vs. 2.0 in AutoMail 7*).
- **IMPROVED REPORT LAYOUT** - Replaced Visual Basic 6 coded reports.
  - New PDF archiving options (by print group, reports)
- **JOB TICKET REPORT** - Created a "Job Ticket" report which combines many pieces of information useful for physically preparing a mailing.
- **Batch Data** - export enhancements (field qualifiers and separator definitions, header options).
- **MailStream Navigator** - Added output for MailStream Navigator (IMb Tracing support)
- **ACS** - Allow selecting TraditionalACS for Intelligent Mail Service Type Identifier
- **Presort** - option to notify on non-auto presort pieces
- **PDF GENERATION** - Better support for PDF generation on 64 bit systems
- **TOOLSET SPECIFIC ENHANCEMENTS** –
  - **StatementFile**
    - Additional Output Files sortation
    - Support for files larger than 2GB
    - Page Header enhancements
  - **PrintStream**
    - PageType added to Doc Design
    - EMFGraphicFiles added to Browse Data
    - Page Inserts enhancements
      - *allow multiple inserts*
      - *allow application to all pages*
    - DATA MATRIX BARCODE –
      - Add custom user field to Data Matrix barcode
      - Add Tray/ZIP Mark to barcode
    - Allow importing data from PDF bookmarks
    - Allow enabling garbage collection for better memory management
    - Add ability to rotate pages 90 degrees to simulate landscape on a portrait page
    - Separate words with whitespace option

- Support for Windows 8/Windows Server 2012 generated spool files
- **ONLINE HELP** - AutoMai 8 provides a direct link to our online help site at <http://help.syntellc.com>. Look in the Help pull-down menu.
- **OTHER ENHANCEMENTS**
  - barcode now standard on SNGLP (Single) piece mail-pieces
  - Full Service IMb ready
  - re-organizing of file-mapping functions. This refers to under-the-hood changes, so to speak, which mostly effect how a SynTel technician configures AutoMail.
- **FORTHCOMING ENHANCEMENTS**
  - Will be replacing the main batch menu and toolbar icons in 8.3. Version 8.2 is deployed at present.
